

## DIGITAL WIRELESS CLOCKS

### 2.5 inch Display

MidWest Time Control's Digital Wireless Wall Clocks are designed to receive the wireless data transmitted from the WIC-100 Wireless Interface Clock and Master Clocks with the wireless option. They are highly accurate electronic clocks with 100% solid state circuitry, no moving parts to wear out. The Time is shown on a 2.5 Inch Red LED display. The display should be visible, under normal lighting conditions, from distances exceeding 35 feet. The clock timing is line synchronous for long term accuracy. The Digital Clocks can also retransmit the time to other clocks on the system. This allows the system to be expanded without adding expensive transmitters.

The DWB series is an assembly to be mounted in a Clock/Speaker Baffle. The Clock/Speaker Baffle is available from several other sources.

The DWC series is enclosed in a high impact ABS plastic housing. The Clock is surface mounted on a single or double gang outlet box. For use in hallways, a Double Dial Hanger Bracket is available.

The DWF series is flush mounted with a Black Panel. The back box is a readily available electrical box.

### Standard Features:

- \* Four Digit Red 2.5 inch LED Display
- \* Line Synchronous Timing - 60 Hz
- \* 12 or 24 Hour Display
- \* Mating Connector Supplied
- \* 115 VAC Power

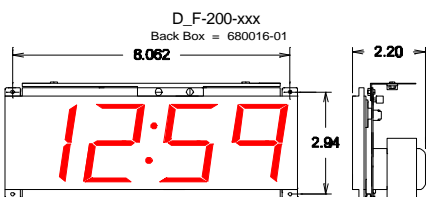

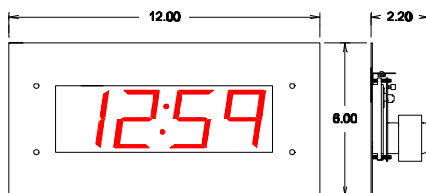

### Optional Features:

- \* Six foot Line Cord
- \* Stainless Steel Front Panel  
(Sealed for Wash-down areas)

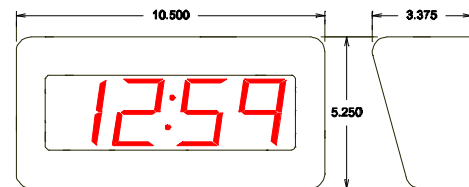

### Specifications:

Operating Power ..... 115 VAC 60 HZ 5 VA  
(24 & 230 VAC and 50 HZ Available)

Weight ..... Approx. 3 Lbs.
